

Biosecurity Guidance for Shows 2020

Biosecurity involves taking steps to prevent the introduction and spread of infectious disease – this is a responsibility for every exhibitor at shows, so that they neither bring disease on to the Show premises, nor take disease back to their farms. The following advice for herd owners is aimed at minimising the risk of spread of disease:

Before the Show:

- **Best Practice re BVD status**

It is best practice for herd owners not to move cattle from their herd if there are any BVD Positive, DAMPI or OFFPI animals in the herd. This is due to the risk of spread of the virus. Herd owners should aspire to their herds attaining BVD Low Risk status, ie where there have been no BVD Persistently Infected animals detected within the previous 12 months and where every animal >35 days of age in the herd and associated herds has a Negative BVD status.

- Exhibitors of in-calf cattle should assess disease risks before deciding to present them for showing. If an animal is between approximately 30 and 120 days in-calf, it will be susceptible to BVD infection and the creation of a Persistently Infected calf if it contacts an animal or material infected with BVD.
- Livestock on the farm should be healthy and any recent abortions investigated.
- Vehicles used to transport any animals to a Show should be cleaned and disinfected, as should any equipment brought to a Show.

At the Show:

- Clean protective clothing and footwear should be worn when handling animals.
- Sharing of equipment should be avoided, including feed and water containers.
- Animal handlers should clean up manure and place it in designated areas.
- Animal handlers should advise event organisers immediately of sick animals and stop all non-essential contact with the sick animal.
- People should minimise (as much as is practical) contact with animals, especially other people's animals.
- If bedding is to be used at the Show, it should be clean. Contaminated bedding should not be removed from the transport vehicle at the Show grounds.
- Contact between animals while at the Show should be reduced to a minimum.

After the Show:

- Protective clothing and footwear should be thoroughly cleaned and disinfected before working with stock at home. Vehicles used to transport animals should be thoroughly cleaned and disinfected at the end of the Show.
- Any clinical signs of disease occurring in animals that have been at the Show during the following three weeks should be reported to the Show Operators.

For all BVD queries, please contact the AHWNI helpdesk on 028 7963 9333 or at info@animalhealthni.com.
